

MARKETING ROI, CUSTOMER SEGMENTATION & COHORT ANALYSIS

Excel Analytics Case Study
By Akib Javed

BUSINESS CONTEXT

Marketing team needs to know:

Multi-channel marketing investment & revenue across Web, Store, Catalog, and Deals.

ROI efficiency and customer value.

Insights used to optimize budget and retention strategy.

Which customers drive most value and how engagement changes as cohort mature.

DATA OVERVIEW

Customer-level purchase, demographic, and engagement data

Marketing spend and attributed revenue by channel

Join date and recency enable cohort-based analysis

OBJECTIVES

ROI & sensitivity: Compare ROI under Low/Base/High budget scenarios.

Attribution: Compute ROI by channel using attributed revenue.

Customer Segmentation: Create value tiers (High/Mid/Low) using percentile calculation.

Cohorts: Track acquisition cohorts by join month and evaluate value plus engagement.

MARKETING ROI DECREASES AS BUDGET INCREASES (SENSITIVITY $\pm 20\%$)

Shows how ROI changes across budget scenarios

ROI peaks when spend is reduced by 20%

Higher spend leads to diminishing returns

Supports disciplined budget control

STORE CHANNEL DELIVERS THE HIGHEST ROI DESPITE LOWER SPEND

Compares attributed revenue, spend, and ROI by channel

Store delivers the highest ROI with moderate spend

Web underperforms despite highest spend

Guides channel reallocation decisions

HIGH-VALUE CUSTOMERS GENERATE THE MAJORITY OF REVENUE DESPITE SMALLER BASE

Customers grouped into High, Mid, and Low value segments

High-value customers drive majority of revenue

Low-value customers form largest group but lowest value

Enables targeted retention and personalization

CUSTOMER ACQUISITION VOLUME DOES NOT ALWAYS TRANSLATE INTO HIGHER COHORT VALUE

Monthly cohorts compared by customer count and total value

Acquisition volume does not equal value

Some smaller cohorts generate higher revenue

Improves acquisition quality assessment

CUSTOMER ENGAGEMENT REMAINS STABLE WHILE AT-RISK RATES STAY CONTROLLED

Active and At-Risk rates calculated using recency

Engagement remains relatively stable across cohorts

At-risk customers remain controlled

Indicates healthy lifecycle engagement

Active ≤ 30 & At-Risk ≥ 90 Days

MARKETING RESPONSE RATES DECLINE FOR NEWER CUSTOMER COHORTS

Response rate tracked across acquisition cohorts

Earlier cohorts show stronger response

Declining response in newer cohorts

Highlights onboarding and activation opportunity

KEY TAKEAWAYS & RECOMMENDATIONS

Avoid overspending due to diminishing ROI.

Reallocate budget toward high-ROI channels.

Prioritize high-value customers with targeted retention.

Convert mid-value customers to high-value via upsell/cross-sell.

Improve early-stage engagement for new cohorts.

Trigger reactivation for at-risk cohorts (Recency ≥ 90) and measure lift.
